Stack Pays Out

S&P +1.08% to fresh intraday high. QCOM +15.12% post-print, CAT +9.88% on AI power. NVDA the lone defection. VIX −10%.

THE SESSION

The catalyst stack the morning brief teed up resolved squarely higher. Four hyperscaler prints, an FOMC hold, the first post-Iran-war Q1 GDP advance, and the Fed's preferred inflation gauge all cleared inside 24 hours, and the S&P 500 rose 1.08% to 7,213.32, touching a fresh intraday high before settling. The Russell 2000 added 2.21%, the Dow climbed 1.62%, and the Nasdaq Composite finished up 0.95%. Volatility collapsed in tandem — the VIX printed 16.93, down 9.99% on the session as the catalyst-anxiety bid compressed.

The composition of the rally was the story. Alphabet's blowout (Google Cloud +63% to $20.03B, total revenue $109.9B, EPS $5.11 against $2.62 consensus) and Caterpillar's Q1 print drove the tape; Meta and Microsoft weighed on the Nasdaq as their raised AI capex guides triggered a multi-day rerating of free-cash-flow assumptions. The Magnificent Seven split in two: the cloud platforms with contracted backlog (GOOGL, AMZN) were rewarded, the platforms increasing capex without commensurate near-term monetization (META −10%, MSFT −5%) were not. Apple reports tonight as the last print of the cycle.

Q1 GDP came in at 2.0% annualized, below the 2.2% consensus but a sharp acceleration from Q4's 0.5%, with investment, government spending, and exports the principal contributors. Core PCE for March printed 3.2% year-over-year, in line with expectations and accelerating from 3.0%, with the headline PCE jumping to 3.5% on the energy pass-through. Initial jobless claims fell to 189,000 for the week ended April 25 — the lowest weekly print since 1969. The labor market remains the tightest datapoint in the macro dashboard.

Brent touched $126.41 intraday, the highest since March 2022, before retreating roughly 3.5% as profit-taking and a sharp dollar weakening (yen +3% on intervention warnings) capped the move. WTI gave back 2.21% to $104.52. Both benchmarks remain on track for a fourth consecutive monthly gain, but the inability to hold the four-year high is the first tactical signal that the energy bid has stretched.

IOWN Tactical: a session in which the Dividend Strategy beat both DVY and SPY by meaningful margins, while the Growth Portfolio captured the day's rotation cleanly, is exactly the dispersion that concentrated, fundamentally-anchored portfolios are built to harvest. Compounders win days like this.

IOWN HOLDINGS: NOTABLE MOVERS

WINNERS

QCOM +15.12% — DIVIDEND STRATEGY

Closed at $179.58 after fiscal Q2 EPS of $2.65 on $10.6B revenue beat $2.55 / $10.58B consensus. CEO Cristiano Amon confirmed initial data-center custom-silicon shipments to a leading hyperscaler later this calendar year and the board authorized a fresh $20B buyback. Automotive revenue hit a record $1.33B (+38% YoY) and crossed a $5B annualized run rate, with management guiding to a $6B+ exit run rate for fiscal 2026.

MARA +11.85% — GROWTH PORTFOLIO

Closed at $11.99 on the announcement of a $1.5B agreement to acquire Long Ridge Energy — a 505 MW combined-cycle gas plant on the Ohio River in PJM territory. The deal lifts owned-and-operated power capacity 65% to roughly 2.2 GW and anchors a planned AI/HPC data-center campus targeting service in mid-2028. Adds approximately $144M in annualized adjusted EBITDA.

CAT +9.88% — DIVIDEND STRATEGY

Closed at $890.11 after Q1 EPS of $5.54 on $17.4B sales (+22% YoY) cleared estimates, with a record $63B backlog (+79% YoY). Management raised the long-term enterprise sales CAGR target to 6–9% from 5–7% through 2030, and lifted the 2030 power-generation sales target to more than 3x the 2024 baseline. Power & Energy +22%, with power-gen revenue +41% to $2.82B on data-center demand.

HUT +6.73% — GROWTH PORTFOLIO

Closed at $75.78 as the bitcoin-miner-to-AI-host thesis caught a fresh bid alongside MARA's deal. Hut 8's $7B 15-year River Bend lease (Anthropic and Fluidstack as anchor tenants) and 8.5 GW development pipeline continue to position the equity as a power-infrastructure compound rather than a hashrate-cycle proxy.

MRVL +5.48% — GROWTH PORTFOLIO

Closed at $165.15. Custom-silicon names rallied as the hyperscaler capex prints (GOOGL, AMZN) and the QCOM data-center entry confirmed the diversification away from a single-vendor accelerator stack. Marvell's ASIC franchise is the cleanest pure-play beneficiary.

AMD +5.16% — GROWTH PORTFOLIO

Closed at $354.49 on the same custom-silicon rotation read. Bank of America reiterated Buy on Nvidia at $300, but the directional call traders are making is share gain at the margin — AMD as the disciplined second source as hyperscalers diversify accelerator suppliers.

KEYS +4.31% GROWTH PORTFOLIO

Closed at $349.91. Test-and-measurement caught the broader semi-cap bid as the 2026 hyperscaler capex stack (now $190B at GOOGL alone, with 2027 guided higher) confirmed the multi-year buildout that Keysight's instrument franchise services.

NEE +3.94% DIVIDEND STRATEGY

Closed at $97.88. Regulated utilities continued to bid as the AI-power thesis broadened beyond pure-play independents. NEE's Florida ratebase plus the FPL renewables backlog is the cleanest scaled exposure to the multi-decade load-growth setup.

GPC +3.82% DIVIDEND STRATEGY

Closed at $107.23. Genuine Parts joined the broad cyclical bid alongside the Caterpillar tape, with the dividend-aristocrat duration premium reasserting on a session in which Q1 GDP confirmed sequential acceleration from Q4's 0.5% pace.

LRCX +3.66% DIVIDEND STRATEGY

Closed at $257.86. Wafer-fab equipment moved with the AMD/MRVL custom-silicon rotation. The hyperscaler capex confirmation flows to LRCX through every accelerator package — whether NVDA, AMD, GOOGL TPU, or QCOM's new hyperscaler chip needs etch and deposition tools.

ADI +3.33% DIVIDEND STRATEGY

Closed at $402.26. Analog devices participated in the broader semi tape with the industrial cycle confirmation from Caterpillar's power-gen comments. ADI's automotive and industrial mix is the IOWN-style proxy for the secular semis bid without the hyperscaler-concentration risk.

COIN +3.32% GROWTH PORTFOLIO

Closed at $187.77. Crypto-platform bid alongside the spot-bitcoin tape and the broader risk-on session. Volume franchise continues to be the cleaner read on adoption than the underlying spot price.

TEL +3.12% DIVIDEND STRATEGY

Closed at $211.66. Connectivity components rallied with the hyperscaler-capex rotation; TE's data-center connector exposure is the under-appreciated leg of the AI infrastructure trade.

FAST +2.79% DIVIDEND STRATEGY

Closed at $44.93. Industrial distribution lifted on the cyclical confirmation from Caterpillar and the broader Russell 2000 +2.21% bid for domestic industrials.

VST +2.63% GROWTH PORTFOLIO

Closed at $157.84. Independent power producer continued to bid alongside the AI-power demand narrative reinforced by Caterpillar's 2030 outlook raise.

DGX +2.58% DIVIDEND STRATEGY

Closed at $194.20. Diagnostics defensives caught a tailwind on the broader risk-on day; Quest's recurring-test franchise remains the IOWN-style steady-state compounder.

AEM +2.53% GROWTH PORTFOLIO

Closed at $188.21. Gold producers participated despite gold up 1.55% to $4,632 — the cleaner read on the inflation-pass-through showing in the 3.5% headline PCE print.

NTR +2.52% DIVIDEND STRATEGY

Closed at $76.00. Fertilizers caught a bid alongside the broader cyclical tape; Nutrien's integrated potash-plus-nitrogen platform is the dividend-strategy commodity hedge.

ATO +2.30% DIVIDEND STRATEGY

Closed at $189.98. Natural-gas distribution utility rallied on the regulated-utility bid catalyzed by the broadening AI-power narrative.

EIX +2.28% GROWTH PORTFOLIO

Closed at $69.49. Edison International recovered after Tuesday's muted post-earnings reaction; the regulated California ratebase plus the wildfire-mitigation framework remain the central thesis.

HOOD +2.37% GROWTH PORTFOLIO

Closed at $72.89. Robinhood reversed Tuesday's post-earnings weakness as the broader risk-on tape and the COIN bid flowed through the retail-platform complex.

STLD +1.91% DIVIDEND STRATEGY

Closed at $228.66. Steel Dynamics participated in the broad industrial bid; metals exposure is the cyclical sleeve of the Dividend Strategy.

TOL +1.84% GROWTH PORTFOLIO

Closed at $142.14. Toll Brothers rallied with the broader cyclical bid despite the 30-year mortgage rate ticking up to 6.30% — the luxury-builder mix continues to insulate from rate sensitivity.

GD +1.64% DIVIDEND STRATEGY

Closed at $344.30. General Dynamics raised 2026 EPS guidance on Marine Systems strength and the prepared remarks framed the Trump defense-budget framework as supportive. The submarine backlog visibility is the multi-year compounding thesis.

LMT +1.60% DIVIDEND STRATEGY

Closed at $517.97. Lockheed Martin caught the same defense bid; the F-35 sustainment annuity and the missile-defense ramp are the dual engines.

IBIT +1.33% DIGITAL ASSET ETF

Closed at $43.32. Spot bitcoin ETF tracked the BTC bid with bitcoin near $76,379 (+0.83%). Volume continues to validate the structural ETF-displacement-of-direct-exchange thesis.

ETHA +1.36% DIGITAL ASSET ETF

Closed at $17.08. Ether ETF participated in the broader digital-asset bid. The IBIT/ETHA pair remains the cleanest two-vehicle digital-asset exposure inside the IOWN sleeve.

DECLINERS

NVDA –4.64% GROWTH PORTFOLIO

Closed at $199.53 in a session where the broader semi tape rallied. The pressure was hyperscaler-custom-silicon specific: Amazon's in-house chip business cited as growing quickly, Alphabet announcing TPU sales to external customers, and Qualcomm confirming a leading-hyperscaler ASIC engagement all converging on the same narrative — that NVIDIA's share at the margin is at risk even as absolute demand and 71% gross margins remain intact. Bank of America reiterated Buy at $300; the trade-down is positioning, not fundamentals.

SUPV –3.52% GROWTH PORTFOLIO

Closed at $8.23. Argentine bank Grupo Supervielle pulled back on idiosyncratic emerging-market positioning; no specific catalyst flagged.

FTNT –2.09% GROWTH PORTFOLIO

Closed at $84.31. Fortinet softened into the broader cybersecurity rotation; the hyperscaler-capex narrative is pulling capital toward direct AI infrastructure beneficiaries and away from second-derivative software names.

ADP –1.45% DIVIDEND STRATEGY

Closed at $211.94 in the wake of yesterday's earnings print. The labor-data backdrop is constructive (initial jobless claims at a 1969 low) but the payroll-services revenue mix flagged margin pressure that the tape priced in today.

CNX –1.04% GROWTH PORTFOLIO

Closed at $38.91. Natural-gas-adjacent CNX Resources gave back as oil retreated 2.21% from the $126 four-year high; the energy bid that drove the prior week was the principal driver of the prior advance, and today's reversal cycled through.

CRDO –1.00% GROWTH PORTFOLIO

Closed at $174.01. Credo Technology drifted modestly lower as the NVIDIA-share narrative spilled into the optical-connectivity adjacencies, though the underlying hyperscaler-capex confirmation is structurally supportive.

ABT –0.59% DIVIDEND STRATEGY

Closed at $90.79. Healthcare-defensive Abbott Labs softened modestly as capital rotated toward cyclicals on the broader risk-on tape.

SSNC –0.27% DIVIDEND STRATEGY

Closed at $69.30. SS&C Technologies traded marginally lower on light volume; no specific catalyst.

HOLDINGS NEWS

QCOM (Q2 fiscal earnings). Cristiano Amon confirmed on the call that initial data-center custom-silicon shipments to a leading hyperscaler are on track for later this calendar year, with a multi-generation engagement framework. The board authorized a fresh $20B buyback on top of the existing program, with $5.4B already completed in the first half of fiscal 2026. Q2 returned $3.7B to shareholders ($945M dividends, $2.8B buybacks). Investor day scheduled for June 24 will provide more detail on the data-center and physical-AI growth initiatives.

CAT (Q1 earnings). Adjusted operating margin expanded 30 bps to 18.0% on $17.4B sales. Construction Industries +38%, Resource Industries +4%, Power & Energy +22%. Power-generation revenue specifically rose 41% to $2.82B with most of that growth tied directly to data-center demand. Backlog of $63B (+79% YoY) provides multi-year visibility. Management is expanding large-reciprocating-engine capacity to nearly 3x the 2024 level, with capital deployment concentrated in 2027–2029. Long-term sales CAGR through 2030 raised to 6–9% from 5–7%; 2030 power-generation sales target raised to more than 3x the 2024 baseline.

MARA (M&A). Announced a $1.5B agreement to acquire Long Ridge Energy from FTAI Infrastructure — a 505 MW combined-cycle gas turbine facility on the Ohio River in the PJM Interconnection territory. MARA already operates a 200 MW co-located data center on the Long Ridge site. The deal lifts total owned-and-operated power capacity 65% to approximately 2.2 GW across PJM, ERCOT, SPP, and international markets, and adds about $144M in annualized adjusted EBITDA. Closing expected in the second half of 2026 pending regulatory approvals; AI data-center service targeted for mid-2028. CEO Fred Thiel: "Power is the scarce input in AI."

GD (guidance raise). General Dynamics raised 2026 EPS guidance on Marine Systems strength, with the submarine backlog continuing to deliver above prior expectations. The defense-budget framework reported earlier this week was characterized as supportive of the multi-year program ramp, particularly Columbia-class.
