Rails and Records

Growth Portfolio +0.93% outpaces IUSG as the Dow closes above 51,000 for the first time. The CFTC clears U.S. crypto perpetual futures — HOOD +11.15%, COIN +3.72%. Megacap chips cool; oil eases as Trump weighs the Iran framework.

THE SESSION

The week closed where the morning framing pointed: the AI and risk-on bid extended, and it did so through a different door than the one the chips opened. The S&P 500 added 0.23% to 7,581 and the Nasdaq 0.22%, both finishing near records, while the Dow led the tape with a 0.72% gain to close above 51,000 for the first time. The week marked the ninth consecutive weekly advance. Breadth was selective rather than broad — the Russell 2000 slipped 0.59% and the VIX eased to 15.33. The Dell read-through that set up Friday's open resolved in favor of extension, but the leadership rotated away from the megacap silicon that has carried the move and toward the connectivity, security, and exchange layers that sit a step removed from the GPU itself.

The session's defining catalyst was regulatory rather than corporate. The CFTC issued its first approvals for U.S. crypto perpetual futures — clearing prediction-market venue Kalshi and granting Coinbase a no-action letter to route global perpetuals and options to U.S. clients through its Bermuda subsidiary. CFTC Chair Mike Selig framed the action as opening one of the most liquid segments of the digital-asset market to the U.S. regulatory framework; Coinbase's leadership noted U.S. traders had been locked out of roughly 80% of global crypto markets. The two exchange names in the Growth Portfolio responded directly, with HOOD and COIN leading the sleeve's winners.

Underneath the index, the dispersion told the story. AI-security and connectivity led — FTNT and CRDO each gained more than 6% — while the megacap chip complex gave back: NVDA, TSM, and NXPI all declined as money rotated within rather than out of the AI theme. The dividend sleeve's defensive and industrial backbone — consumer staples, utilities, and machinery — lagged a tape that rewarded growth and financials, leaving the strategy modestly behind both of its benchmarks on the session even as it holds a comfortable year-to-date lead.

IOWN Tactical: A tape that notches another Dow record while rotating its leadership from silicon to the rails around it is a market broadening, not narrowing. The committee's construction — the AI infrastructure layer in growth, cash-generative dividend payers as ballast — is built to participate in the extension without depending on any single name carrying it.

IOWN HOLDINGS: NOTABLE MOVERS

WINNERS

HOOD +11.15% — GROWTH PORTFOLIO

Led the sleeve as the CFTC cleared U.S. crypto perpetual futures, removing a long-standing barrier between domestic retail platforms and the global derivatives market. The product road opens directly into Robinhood's active-trader franchise.

FTNT +6.38% — GROWTH PORTFOLIO

Cybersecurity demand and the FortiAIGate platform — built on NVIDIA's AI stack to secure enterprise AI workloads — continued to draw a bid as the AI-security theme drew capital rotating out of pure silicon.

CRDO +6.15% — GROWTH PORTFOLIO

The AI connectivity name extended ahead of its fiscal Q4 report due after Monday's close (June 1). Strength in the interconnect layer tracked the Dell-driven data-center build read-through more cleanly than the GPU makers did.

COIN +3.72% — GROWTH PORTFOLIO

The Coinbase no-action letter lets the exchange connect U.S. users to global perpetuals and options through its Bermuda unit — a structural widening of the addressable market that the operating side captured more than the spot asset did.

QCOM +3.18% — DIVIDEND STRATEGY

Extended its post-earnings run, among the week's strongest dividend-sleeve performers, as chip-industry leadership prepares to gather in Taiwan and the connectivity franchise drew continued attention.

AEM +2.91% — GROWTH PORTFOLIO

The gold miner tracked bullion roughly 1% higher to fresh elevated levels as the dollar headed for a weekly loss, providing a non-correlated lift inside the growth sleeve.

DECLINERS

OKE –3.54% — GROWTH PORTFOLIO

The midstream name was the energy sleeve's softest mover as crude eased toward $92 on rising odds of an Iran framework and Hormuz reopening — the war-risk premium compressing out of the energy infrastructure complex.

NXPI –2.70% — GROWTH PORTFOLIO

Caught in the broad megacap-chip pullback as leadership rotated toward connectivity and security. The move reflected positioning within the AI theme rather than a change in the demand picture.

ATO –2.25% DIVIDEND STRATEGY

The regulated utility lagged a risk-on, growth-led tape, consistent with the rate-sensitive defensives giving back ground on a session that rewarded cyclical and financial exposure.

CHD –2.05% DIVIDEND STRATEGY

Consumer staples sold off alongside the broader defensive complex as capital rotated toward growth and financials; the move was sector-wide rather than name-specific.

NVDA –1.40% GROWTH PORTFOLIO

The AI bellwether gave back modestly within its recent post-earnings range as the day's leadership shifted to the layers around the GPU. The pullback was rotation, not retreat from the thesis.

HOLDINGS NEWS

DGX upgraded. Quest Diagnostics was lifted to Buy on improving fundamentals, a modest positive for the dividend sleeve's healthcare exposure on a day the broader defensive complex lagged.

CRDO into earnings. Credo Technology reports fiscal Q4 after Monday's close (June 1). The print is the next direct IOWN-side read on the AI connectivity cycle following Dell's data-center build signal; the name carries elevated implied volatility into the event.
