

The Rotation Returns

Samsung's record beat triggers a chip give-back; S&P -0.45%. Energy and defensives catch the Hormuz bid — the Dividend sleeve holds green while Growth wears the semiconductor reset.

THE SESSION

The record close did not survive the reopen. Monday delivered a chip-led record for the S&P 500 and a fresh high for the Dow above 53,000. Tuesday took much of it back. Samsung's preliminary second-quarter numbers landed as a genuine triumph on paper — operating profit up roughly nineteen-fold from a year ago, comfortably ahead of consensus — and the market sold it anyway. The reading was not that the results were weak; it was that they were merely good after a group that had run so far, so fast that even a record beat could only clear the bar by a few points. That is what a crowded trade looks like when it pauses to catch its breath.

The give-back was concentrated exactly where the gains had been. South Korea's Kospi fell nearly 5% and briefly halted trading; the U.S. semiconductor complex followed, with the broad chip ETFs off 5% or more and the memory and equipment names leading the retreat. Underneath it, a Reuters report that China's DeepSeek is developing its own inference chip gave the tape a second reason to trim the highest-multiple positions. This is a reset of expectations, not of fundamentals — high-bandwidth memory remains tight, and the beat itself confirms the AI capital cycle is still turning.

What made the session instructive was not the sell-off but the rotation beneath it. As the AI trade cooled, capital did not leave the market — it moved. Energy caught a firm bid as Iran's strike on a Qatari tanker near the Strait of Hormuz lifted Brent about 3% and the U.S. moved to revoke Iran's license to sell oil. Utilities, staples, and healthcare drew the defensive flows. The result was a market that looked far calmer at the index level than the chip headlines suggested, with the Dow down a quarter percent while the Nasdaq shed more than a full point.

IOWN Tactical: A diversified book is built precisely for a day like this — one where the leadership stumbles and the ballast holds. We do not chase the sleeve that is winning on any given Tuesday; we own both so that the portfolio, not the headline, sets the pace.

IOWN HOLDINGS: NOTABLE MOVERS

WINNERS

DVN +5.08% DIVIDEND STRATEGY

The day's standout. The Hormuz tanker strike and Washington's move to revoke Iran's oil-sale license reinjected a geopolitical premium into crude, and Devon carried the upstream lift for the sleeve.

OKE +3.71% GROWTH PORTFOLIO

ONEOK rode the same energy bid, with midstream benefiting from firmer crude and renewed focus on secure North American throughput.

CVX +3.52% GROWTH PORTFOLIO

Chevron advanced with Brent up roughly 3% on the day, the integrated major acting as the portfolio's direct read on the Hormuz headlines.

HRMY +3.38% GROWTH PORTFOLIO

Harmony Biosciences drew the defensive, non-cyclical bid as capital rotated out of high-beta technology and toward steadier healthcare cash flows.

ADP +2.55% DIVIDEND STRATEGY

Automatic Data Processing gained as the classic quality-defensive compounder caught the rotation into durable, recurring-revenue names.

DECLINERS

MRVL -7.45% GROWTH PORTFOLIO

Marvell led the semiconductor give-back, one of the hardest-hit names as the group unwound part of its extraordinary 2026 advance on the Samsung read-through.

CRDO -7.21% GROWTH PORTFOLIO

Credo fell with the broader connectivity and memory-adjacent complex; a high-multiple name surrendering recent gains as expectations reset.

MARA -6.95% GROWTH PORTFOLIO

Marathon Digital tracked the risk-off tone in high-beta and crypto-linked equities, with Bitcoin easing modestly alongside the tech pullback.

LRCX -6.87% DIVIDEND STRATEGY

Lam Research was the Dividend sleeve's lone material drag — semiconductor-equipment names bear the capital-spending read-through most directly when the chip cycle is questioned.

AMD −6.51%

GROWTH PORTFOLIO

Advanced Micro Devices retreated from Monday's level, a high-P/E leader with little room for disappointment on a day the market chose to reprice the whole group.

TSM −4.25%

GROWTH PORTFOLIO

Taiwan Semiconductor eased with the foundry and AI-supply chain, the DeepSeek chip report adding to the day's pressure on the complex.

HOLDINGS NEWS

Lockheed Martin (Dividend Strategy) — F-35 in focus at the Ankara NATO summit. Coverage tied the summit to renewed attention on F-35 sales and defense procurement, with Lockheed reportedly moving to boost production. The shares still closed modestly lower (−0.49%) on the broader defensive-versus-cyclical crosscurrents, but the program backdrop remains a constructive run-rate item for the defense sleeve.

Energy sleeve — policy joins price. Beyond the Hormuz strike, the U.S. moved to revoke the license authorizing Iranian oil sales, a supply-side signal that reinforced the bid across Devon, ONEOK, and Chevron. Brent settled up roughly 3% with further gains reported after hours on the license news.

NVIDIA (Growth Portfolio) — held its ground. Despite the DeepSeek inference-chip report and a sharp sector sell-off, Nvidia closed higher (+0.71%), a notable divergence from peers and a reminder that the franchise names can decouple from a broad-group repricing.
