

Across the Stack

Dow to fresh record. QCOM ↑11.60%, CRDO ↑12.94% lead chip strength as NVDA extends its post-print slide. Both strategies advance roughly 1.3%, beating benchmarks broadly.

THE SESSION

The Dow closed at a fresh record above 50,500 on Friday as a powerful rally across the semiconductor complex carried the IOWN sleeves to a strong finish into the long weekend. The S&P 500 ETF closed at \$745.70 (↑0.40%), the Nasdaq proxy at \$562.97 (↑0.19%), and the Russell 2000 at \$282.49 (↑0.91%), while the Dow proxy added another leg to push to a new all-time high. Volatility eased modestly with the VIX at 16.77, and Treasury yields drifted lower on a defensive backdrop.

The defining feature of the tape was the chip-led narrowing that the morning brief flagged playing out almost exactly as framed. Connectivity, foundry-adjacent, and CPU names ran while Nvidia continued its post-print drift — CRDO ↑12.94% to \$218.41, QCOM ↑11.60% to \$238.16 in the Dividend sleeve, NXPI ↑5.71% to \$316.47, AMD ↑3.99%, MRVL ↑2.96%, ADI ↑3.35% reversing yesterday's post-print decline, and KEYS ↑2.67%, against NVDA ↓1.90% to \$215.33 for its second consecutive regular-session decline after Wednesday's after-the-close print. Per coverage, the Qualcomm move tied to its strategic push back into the data-center CPU market and a disclosed collaboration with Nvidia on AI cluster solutions — a vote on the AI infrastructure spend cycle, not against it.

The University of Michigan's final May sentiment reading landed this morning at 44.8, revised down sharply from the 48.2 preliminary and the third straight monthly decline. Per the survey's director, that mark is the lowest in the index's history dating to 1952. One-year inflation expectations firmed to 4.8% from the 4.5% preliminary, and five-year expectations rose to 3.9% from 3.4%. Bitcoin gave back ground at \$75,807 (↓2.28%), and the IOWN digital-asset sleeve traded with it — IBIT ↓2.36% and ETHA ↓3.59%. Separately, President Trump swore Kevin Warsh in as the new Federal Reserve Chair at the White House this morning, the first such ceremony there since 1987.

IOWN Tactical: a bifurcated chip tape with Nvidia drifting while the layers it anchors hit fresh highs is the clearest read yet that the AI build-out is broader than the headline name. Owing across the stack is what turns that bifurcation into an alpha day rather than a tracking-error problem.

IOWN HOLDINGS: NOTABLE MOVERS

WINNERS

CRDO +12.94%

GROWTH PORTFOLIO

Closed at \$218.41 with an intraday range from \$195.47 to \$218.95, extending a multi-week run on AI-infrastructure connectivity demand. The story has shifted from speculative momentum toward a recognized hyperscaler-reliability platform spanning copper, optics, and near-package interconnect — the layer Nvidia's silicon depends on.

QCOM +11.60%

DIVIDEND STRATEGY

Closed at \$238.16 with a wide intraday range from \$214.17 to \$243.00 on the data-center CPU push and a disclosed AI-cluster collaboration with Nvidia — positioning the franchise beyond handsets into the AI infrastructure tier the rest of the IOWN chip sleeve already addresses.

NXPI +5.71%

GROWTH PORTFOLIO

Closed at \$316.47 in a sharp reversal of the prior session's automotive-semiconductor weakness — the cleanest example today of dispersion inside the chip complex resolving back toward fundamentals rather than concentrating in a single leader.

VST +4.82%

GROWTH PORTFOLIO

Closed at \$156.27 as the AI-power complex extended its run alongside the chip rally. Yesterday's utilities-led leadership compounded with today's capacity narrative — data-center electricity demand and nuclear baseload exposure continue to read as one trade, not two.

AMD +3.99%

GROWTH PORTFOLIO

Closed at \$467.51 as the AI-CPU rally carried the GPU challenger higher alongside QCOM and the connectivity layer. Trades as the natural beneficiary when the AI thesis broadens beyond Nvidia.

STLD +3.53%

DIVIDEND STRATEGY

Closed at \$240.03 as the cyclical-industrial complex participated in the rally. Steel demand keys to the same data-center build-out and electrification capex the power sleeve is positioned around.

ADI +3.35%

DIVIDEND STRATEGY

Closed at \$397.07 in a sharp reversal of Thursday's post-print decline. The analog sleeve's second-day rebound reads as buyers stepping in once the initial earnings reaction was complete.

ADP +2.38%

DIVIDEND STRATEGY

Closed at \$225.31 on broad strength in the services-and-payrolls complex into the holiday weekend. A defensive earner that participated in the broad advance.

VLO +2.43%

DIVIDEND STRATEGY

Closed at \$246.96, recovering a portion of Thursday's 5% decline as crude held its modestly weaker bid. The refining sleeve continues to track crack-spread economics rather than directional crude.

LMT +2.00%

DIVIDEND STRATEGY

Closed at \$533.24 as defense extended its quiet leadership inside the Dividend sleeve. The orthogonal-hedge role remains intact regardless of which way the energy-and-geopolitics tape resolves.

DECLINERS
ATAT -5.45%

GROWTH PORTFOLIO

Closed at \$33.84 with sellers continuing the recent slide in the small-cap China-consumer name. No single-name catalyst surfaced in the data drop; the move reads as continued risk-off rotation out of the lower-liquidity segment of the Growth sleeve.

SUPV -5.14%

GROWTH PORTFOLIO

Closed at \$7.93 as Latin American financial names lagged. Continues to read as a position-sizing question more than a thesis break.

COIN -4.43%

GROWTH PORTFOLIO

Closed at \$184.99 alongside the Bitcoin tape, which printed near \$75,800 on the day (+2.28%). The exchange remains a cleaner expression of crypto-cycle beta than the spot ETFs in the digital-asset sleeve.

ETHA -3.59%

DIGITAL ASSET ETF

Closed at \$15.57 with Ether weaker alongside Bitcoin into the long weekend — rate-cut expectations softening on the firmer inflation prints flagged in the UMich data continue to weigh.

HOOD -3.00%

GROWTH PORTFOLIO

Closed at \$73.64 as retail-trading beta gave back ground with the digital-asset sleeve. The platform's sensitivity to crypto-cycle volume is the dominant short-term driver.

IBIT -2.36%

DIGITAL ASSET ETF

Closed at \$42.96 as Bitcoin slipped to roughly \$75,800 on continued rate-hike repricing. Spot ETF flows remain the structural anchor on the institutional side even as price action softens.

NVDA -1.90%

GROWTH PORTFOLIO

Closed at \$215.33, extending the post-print drift into a second consecutive regular session following Wednesday's after-the-close report. The single-name move is being absorbed across the rest of the IOWN AI-infrastructure sleeve, which closed at or near highs.

NEE -1.27%

DIVIDEND STRATEGY

Closed at \$88.55, a modest pause in the power-complex rally after yesterday's gain on the Caliber acquisition announcement. The structural thesis is unchanged.

HOLDINGS NEWS

Qualcomm. The session move tied to a strategic move back into the data-center CPU market and a disclosed collaboration with

Nvidia on AI cluster solutions, per coverage referenced in the data drop. Multiple analysts raised price targets, and the share-price reaction extended a recent constructive run on AI infrastructure exposure beyond handsets.

Marvell. Per coverage, Stifel raised its price target citing AI-demand visibility. MRVL closed at \$196.33 (+2.96%) on the day, consistent with the broader connectivity-tier strength.

NextEra Energy. Per coverage, additional reporting tied to the previously announced Dominion combination — the largest power-sector deal in recent memory — continued to circulate. NEE pulled back -1.27% to \$88.55 after Thursday's advance on the Caliber bolt-on announcement.
