

Breadth Returns

Participation widens beneath a flat tape — Russell 2000 +0.90% leads, VIX eases to 15.7. Marvell +32.5% on its AI-switch launch and Huang’s “next trillion-dollar” nod. Both IOWN sleeves beat their benchmarks; Bitcoin –6% the lone divergence.

THE SESSION

The question the morning posed now has an answer. A tape printing fresh highs on the narrowest participation in weeks faced a binary outcome: leadership either broadens, or it mean-reverts. Tuesday broadened. The S&P 500 added 0.14% to 7,610.51 and the Nasdaq closed essentially flat at +0.03%, but beneath that placid surface the Russell 2000 led every major index higher at +0.90%, the Dow advanced 0.45% to 51,307.79, and the VIX eased to 15.73. Participation widened rather than narrowed.

Marvell anchored the session. Shares closed +32.52% after Nvidia’s Jensen Huang, in conversation with chief executive Matt Murphy at Computex, called Marvell “the next trillion-dollar company” and the firm unveiled its Teralynx T100 — described as the industry’s first 102.4 Tbps switch built for AI data-center networking. With Nvidia’s recent \$2 billion investment and fiscal first-quarter revenue up 28% year-over-year, the endorsement landed on fundamentals rather than rhetoric. The move radiated across the connectivity and semiconductor complex: ADI +5.09%, QCOM +5.17% (erasing Monday’s PC-competition decline), LRCX +5.45%, KEYS +5.02%, NXPI +3.93%, and TSM +2.54%.

What distinguished Tuesday from recent sessions was where the strength extended. Caterpillar rose 5.14% as its power-generation franchise — the engines and turbines feeding AI data centers — continues to anchor a record order backlog. Steel Dynamics added 3.75%, PACCAR 3.12%, and Freeport-McMoRan 6.98% on the copper bid. The AI-infrastructure trade, long concentrated in the chipmakers, broadened into the industrials, materials, and power names that build and feed the buildout. Notably, Nvidia itself eased 0.69% — the leader rested while the rest of the field caught up, a characteristic signature of a broadening market.

The lone divergence was digital assets. Bitcoin fell roughly 6% to near \$66,900, its weakest level since April, pressured by

Strategy’s first disclosed bitcoin sale since 2022 and a record eleven-session stretch of spot-ETF outflows totaling about \$3.45 billion. The committee’s digital-asset sleeve felt it directly — IBIT –6.03%, ETHA –4.83% — and the crypto-adjacent equities followed: COIN –4.72%, MARA –3.84%, HOOD –2.83%. Capital appeared to rotate out of crypto and into the AI and semiconductor complex, two sides of the same risk ledger.

On the geopolitical front, the tone softened from the morning’s framing. Reuters reported that Iran is studying a deal to halt the war and that talks are proceeding continuously, though Secretary of State Rubio clarified that no sanctions relief has been offered to reopen the Strait of Hormuz. Oil held a firm bid — VLO +2.27%, OKE +2.08%, CVX +0.93% — supported as much by the value rotation as by the residual war premium. Defense consolidated modestly, with LMT –0.59% and GD –0.47%.

IOWN Tactical: A market that broadens is a sturdier market than one that climbs on a handful of names. Tuesday’s participation — value, industrials, materials, and chips advancing together — is the kind of foundation that rewards owning the whole portfolio rather than chasing the leader.

IOWN HOLDINGS: NOTABLE MOVERS

WINNERS

MRVL +32.52% GROWTH PORTFOLIO

Huang called Marvell “the next trillion-dollar company” at Computex; the firm launched the Teralynx T100 102.4 Tbps AI switch atop 28% revenue growth and Nvidia’s \$2B stake.

FCX +6.98% GROWTH PORTFOLIO

Copper rallied with the broadening industrials-and-materials bid tied to AI-infrastructure and grid buildout.

LRCX +5.45% DIVIDEND STRATEGY

Semiconductor-equipment names rode the chip complex higher on the Marvell-led AI-networking enthusiasm.

QCOM +5.17% DIVIDEND STRATEGY

Recovered Monday’s PC-competition decline; flagged among the Computex AI winners alongside Nvidia and Marvell.

CAT +5.14% DIVIDEND STRATEGY

AI data-center power-generation demand continues to underpin a record backlog; a Dow leader on the session.

KEYS +5.02% GROWTH PORTFOLIO

Test-and-measurement exposure to the AI hardware cycle drew buyers alongside the broader semiconductor advance.

DECLINERS

IBIT –6.03% DIGITAL ASSET ETF

Tracked bitcoin’s ~6% slide to near \$66,900 amid record spot-ETF outflows and Strategy’s first disclosed BTC sale since 2022.

ETHA -4.83%

DIGITAL ASSET ETF

Ether declined with the broad digital-asset risk-off move.

COIN -4.72%

GROWTH PORTFOLIO

Crypto exchange pressured by the digital-asset selloff and a softer near-term trading-volume backdrop.

MARA -3.84%

GROWTH PORTFOLIO

Bitcoin miner fell with the underlying as crypto sentiment deteriorated.

SYK -2.06%

DIVIDEND STRATEGY

Medical-technology gave back ground on a session that favored cyclical and chips over defensives.

HOLDINGS NEWS

General Dynamics. The defense contractor will invest approximately \$200 million to restart a Texas munitions facility, per market reporting — adding domestic production capacity against a backlog-rich ordnance environment.

Robinhood. The platform agreed to acquire WonderFi for C\$250 million to enter the Canadian crypto market and separately launched an agentic-AI tool for stock trading, extending its product surface even as crypto-linked shares traded lower on the day.

Marvell. Beyond the price move, the Teralynx T100 launch and record fiscal first-quarter revenue (up 28% year-over-year, with AI bookings described as exceptional) provided the fundamental backdrop to the session's largest single-name advance.
